

SSE Green – 100% renewable energy

Choose clean reporting with zero emission REGOs

SSE Green has been designed to help industrial and commercial organisations with their greenhouse gas reporting. With SSE Green, all of the electricity your organisation uses will come with a zero emission rating. 100% of our SSE Green electricity is backed by Renewable Electricity Guarantee of Origin's (REGO's). The consumption used is matched with an equivalent volume of renewable electricity generated from large scale wind and hydro sources and exported onto the National Grid.

Meeting the GHG Protocol Corporate Standard

Using the 'market-based' reporting method under the GHG Protocol Corporate Standard, Scope 2, the electricity you purchase can be matched to Renewable Energy Guarantees of Origin (REGOs), allowing you to report zero emissions for 'Scope 2' purchased electricity.

SSE Green
The simple way
to achieve zero
emissions

The green approach that's good for business

SSE has the broadest renewable generation portfolio in the UK and we continue to invest in the infrastructure the country needs to produce more green energy. Since April 2007 SSE has invested over £4bn in renewable sources of generation with over 2,500MW of wind (onshore and offshore) and Hydro assets in operation. We also have under construction approximately a further 400MW of onshore wind generation.

Our renewable energy capacity provides a real bonus for companies that have to account for their Scope 2 emissions under the GHG Protocol Corporate Standards.

While UK 'standard' electricity from any of the major suppliers reflects a mix of generation sources (including coal, gas and nuclear alongside renewable technologies), SSE Green is 100% renewable energy enabling zero emissions reporting.

SSE Green benefits

Report zero emissions for 'Scope 2' purchased electricity

Reduce your organisation's carbon footprint

Demonstrate your commitment to renewable and sustainable goals

Enhance your reputation with customers and other stakeholders

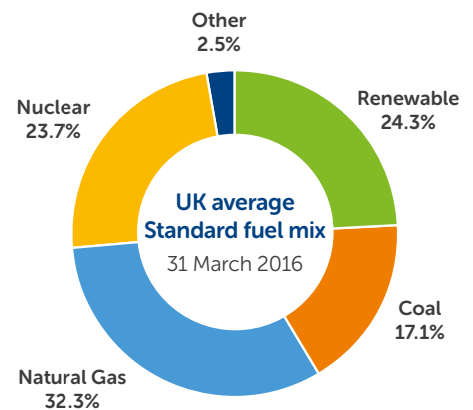

Demonstrate best practice in your marketplace

How does SSE Green compare?

SSE Green is 100% renewable energy generated by a variable mix of hydro-electric, offshore and onshore wind depending on prevailing weather conditions.

What are REGOs?

REGO stands for Renewable Energy Guarantees of Origin. It certifies that the electricity purchased comes from a renewable source. One REGO is issued for each megawatt hour of renewable electricity generated.

The REGO scheme is administered by Ofgem and has been designed to increase transparency for consumers who wish to buy renewable energy.
